Professional Summary

Data Science undergraduate at Sikkim Manipal Institute of Technology with experience in machine learning, NLP, chatbot development, data analysis, and AI-driven automation. Familiar with building data pipelines, document-processing workflows, and retrieval-augmented generation (RAG) applications using Python and modern AI tools. Interested in AI agents, industrial intelligence, and MLOps.

Education

Sikkim Manipal Institute of Technology (SMIT) *2024 – 2028*
B.Tech in Data Science CGPA: 8.6/10
DAV Public School *2022 – 2024*
Class XII Percentage: 73%

Technical Skills

Programming: Python, Java, C, SQL
Data Science and ML: NumPy, Pandas, Scikit-learn, TensorFlow, Matplotlib, Seaborn, NLP, Statistics
AI and LLMs: RAG, LangChain, AI Agents, Prompt Engineering, LLM Integration, Chatbots
Data Engineering and MLOps: Apache Airflow, Data Pipelines, PySpark, Docker, FastAPI, Git
Databases and Tools: MongoDB, SQL, Neo4j, Qdrant, Jupyter Notebook, Google Colab, Databricks

Experience

EMEYC Pvt. Ltd. *May 2026 – Jul 2026*
Data Science Intern

- Contributed to AI-driven automation workflows involving document processing, structured data extraction, and data validation.
- Worked on menu automation and review analysis solutions using AI-based processing techniques.

Accesco *Dec 2025 – Feb 2026*
Associate MLOps Engineer and Data Analyst

- Developed chatbot functionality using Dialogflow by configuring intents, entities, and webhook-based fulfillment.
- Analyzed conversation logs and supported database management, query handling, schema organization, and data-integrity checks.

Projects

AstraMind – Industrial Intelligence Platform

- Worked on an industrial intelligence platform concept for conversational access to enterprise knowledge and technical documents.
- Explored AI-agent and RAG workflows for Quality Management System (QMS) analysis, Root Cause Analysis (RCA), and document retrieval.

AI-Powered Menu Automation System – Tshitto

- Contributed to a workflow for extracting and validating structured information from menu documents using OCR and LLM-based processing.
- Worked on menu consolidation, description generation, and food-image lookup workflows.

Self-Healing Data Pipeline

- Developed a Python-based data pipeline with automated orchestration and error-handling workflows.
- Used Apache Airflow concepts to organize pipeline execution and support recovery from processing failures.
- **Live Demo:** View Project

Spam Classification Using NLP

- Developed a text-classification workflow to identify spam messages using NLP preprocessing and machine-learning techniques.
- Worked on text preprocessing, feature preparation, model training, and classification.

Certifications

- Data Analytics using Python – NPTEL
- Machine Learning – Andrew Ng, Coursera
